Ms. Nita Fuller  
Assistant Regional Director of Refuges and Wildlife  
Region 3  
Federal Building  
Fort Snelling  
Twin Cities, MN 55111

A summary of the 1983-2004 gypsy moth trapping program at Ottawa National Wildlife Refuge is enclosed for your information (Table 1). A map showing the trap locations is also enclosed (Figure 1). The purpose of the trapping program is to monitor low-level gypsy moth populations and help determine when more intensive survey methods should be employed.

Trap catches at Ottawa NWR averaged 13 moths per trap in 2004. This is a decrease from 15 moths per trap in 2003. Based on these results, gypsy moth populations will not have an impact on the forest resources in the immediate future at Ottawa NWR.

Figure 2 shows 2004 gypsy moth Slow-the-Spread (STS) trapping results in Ohio. The insert on the figure shows a close-up of the STS results in relation to the Ottawa NWR properties. For more information regarding the STS, visit <http://www.gmsts.org>

It is important for Ottawa NWR personnel to continue looking for other gypsy moth life stages such as larvae, pupae and/or egg masses while performing their normal duties. The GM Digest web page is a good resource for general gypsy moth information, as well as, having publication links that can be helpful in the identification of these life stages. The web address is: <http://na.fs.fed.us/wv/gmdigest>.

We would like to continue the trapping programs at the same intensity in 2005. Thank you for your continued cooperation and if you have any questions regarding these results, please call Karen Felton at (304) 285-1556.

Sincerely,

JOHN W. HAZEL  
Field Representative  
Morgantown Field Office
